Abstract Template

Tittle: Impact of Climate Change on food security and local Livelihood in Afghanistan

Keywords: Food security, Climate change, local agriculture, Afghanistan

I. Abstract Body (up to 300 words)

This study will concentrate on food security in rural areas of Afghanistan, the research will carry out in six provinces of country, which is hugely facing uncontrolled and severe droughts and the consequence of climate changes as recently the drought has damaged agriculture and livelihood, the inhabitants in rural population extremely is depending on agriculture and animals products.

The selected provinces are a semi-arid and mountainous, flooding and natural disastrous are seasonal difficulties for them; the ongoing armed conflict is another plague on way of sustainable solutions that occasionally has suspended humanitarian efforts.

Climate change is targeting the poorest farmers and pastoralists who are living in the front-line of calamity of environmental disastrous, by this study will try to find out on national-level the understanding of where the impact of climate change on food security and livelihood are most considering and need to be addressed and attract pay attention of state and its policymakers.

The biggest impact of climate change that Afghanistan is suffering is that change in rain patterns, reduction of annual rainfall, temperature and so on.

By this study will identify the workable crops and its marketing and value Chain and importantly the farmer's perception about climate change.

Farmers and pastoralists are damage right now by climate change, as we know that Afghanistan is highly vulnerable countries in the world to climate change as it has very limited capacity and measurement to address the impacts of climate change and citizen food security.

In addition, access to reliable and updated data pertaining to climate change and food security in terms of insecurity in the ground is another big challenge for researchers and policymakers, therefore, this assessment will try to collect primary and update data that would be useful to analyze the certain conditions and future of climate change.
