Abstract

.

The management of children with cleft lip and palate presents many challenges but also many rewards. Our involvement with these children and their families often begins before birth and can extend into late adulthood. Affected individuals present a multiplicity of problems and effective management involves a wide range of specialists.
[1,2,3]Thecurrentlyacceptedmodelfordeliveryofthiscareint hemostappropriatewayis
[4,5,6]themultidisciplinarycleftteam.Thisisagroupofindividu alsfromdifferentspecialist backgrounds who work closely together, not only to bring each specialist's particular expertise to the patient in the optimum way, but also to develop an understanding of the requirements and specialist skills of the other team members to enhance the delivery of the total package. It has been suggested that such an integrated system of delivery of care enables the individuals within the team to function in an interdisciplinary way so that all aspects of health care for the cleft condition can be delivered in as seamless a way as possible.[1-6] This presentation and its consequences are discussed later. .
