ABSTRACT : Improved diagnostic and therapeutic options, healthcare has experienced an explosion of innovations desi

gned to improve life expectancy and quality of life. As healthcare organizations face unprecedented challenges to improve quality, reduce harm, improve access, increase efficiency, eliminate waste, and lower costs, innovation is becoming a major focus once again. Under our present system, just doing our best or working harder will not be enough. The healthcare industry is on the brink of massive change

In the 21st Century Economy has defined innovation as "the design, invention, development, and/or implementation of new or altered products, services, processes, systems, organizational structures, or business models for the purpose of creating new value for customers and financial returns for the firm. "Viewed comprehensively, innovation represents the implementation of new or significantly improved products, services, or processes. It can also imply new organizational models, methods of service delivery, ways of relating to customers, and approaches to marketing

Innovation in healthcare is especially challenging. We operate in a heavily regulated, compliance-oriented, risk-averse, time-crunched environment that tends to squash new thinking rather than foster it. Paradoxically we are at a stage in healthcare where so much is broken that innovation is desperately needed to fix it.

Currently Innovation in Digital Health is playing a SMART Role in Healthcare delivery system. This era is witnessing the transformation of technology with strict adherence to big data integration and analysis bounded to process and policies on Clinical decision making ,patient engagement, smart access – wearable health monitoring and assessment system.
