DEPOPULATION BY VACCINATION: THE FINAL SOLUTION

Kevin M. Galalae, Center of Global Consciousness (European Union)

ABSTRACT:

After seven decades of population control by chemically and covertly subverting human reproduction with endocrine disruptors, half the world has reached the last stage of the demographic transition / depopulation program, characterized by inverted population pyramids, thus by too many old and not enough young people to bear the old age burden and by a median age over 40 years. In response to this unsustainable demographic situation, governments and the UN system have begun a program of rapid depopulation through mandatory immunizations and have unleashed a lab-engineered pneumococcal virus in China and are spreading it across the world in order to have the pretext necessary to force vaccinate adults across the world with cancer causing vaccines designed to bring the global population down to sustainability, but purportedly administered to protect public health. By 2023 the vast majority of adults will have been infected with cancer and 80% of the global population will die of cancer over the coming decades, as planned by our own governments and the UN's World Health Organization. It is hoped that through this engineered global genocide that will prematurely kill at least half the world's population, human civilization will reach a stable and sustainable population structure.

Biography

Kevin Galalae is the world's foremost independent authority on the depopulation/globalization axis around which the international system revolves since the inception of the United Nations in 1945. He is the founder and director of the Center of Global Consciousness, the People's Protection Force, OM, and Freedom in Education, four NGOs with global reach focused on reforming the international system. He is a historian and political activist who has published ten books on geopolitics and hundreds of articles and has changed policy both nationally and internationally.
