Medical Cryolipolysis

MEDICAL CRYOLIPOLYSIS

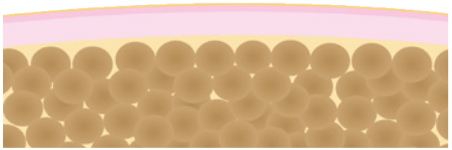

ADIPOCYTE TREATMENT BY FREEZING – THE INNOVATION FROM THE USA

Cryolipolysis is a worldwide established and acknowledged procedure to treat local adipocytes by controlled freezing. The treatment is non-invasive, thus leaving no unpleasant scarring. Additionally, no recovery time is necessary after treatment. In the US, cryolipolysis has already being utilised successfully for years, both in aesthetics as also in dermatology. Developed by dermatologists from the Harvard Medical School (USA), cryolipolysis is based on the scientific discovery that fat cells are more sensitive to cold stimuli than other tissue structures. This effect can be used for fat treatment.

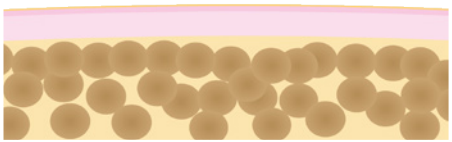

Using a cold vacuum applicator, local fat cells are cooled down under controlled conditions for around 70 minutes. Any surrounding tissue such as skin, muscles, nerves etc. are in no way affected by the procedure.

> DUE TO THE EXTREMELY GENTLE NATURE OF THIS TREATMENT, WORK-RELATED, SPORT OR OTHER RECREATIONAL ACTIVITIES CAN EASILY BE CARRIED OUT IMMEDIATELY AFTERWARDS.

Due to the extremely gentle nature of this treatment, work-related, sport or other recreational activities can easily be carried out immediately afterwards.

4 STEP TREATMENT

CRYOLIPOLYSIS TREATMENT PROCEDURE AT ICE AESTHETIC®

During a detailed consultation, we will discuss your personal wishes and goals. Based on this information, along with your body values, we will prepare an individual treatment plan including a follow-up guideline.
At times, a treatment plan for the selected body zone may involve several treatment sessions. The number, duration and frequency of these treatments will be adjusted to suit your wishes and body values, ensuring optimal results.
Before using the applicator, a special cold protection cloth will be placed on the area for treatment, to protect the skin. Subsequently, the fat deposit to be treated will be placed under the cold vacuum applicator and cooled down in a controlled manner.
On areas with less flexible tissue, like the outer thighs or saddlebags, the so-called Amethyst applicator is used. This patented applicator uses large-scale cooling plates instead of a vacuum.
During the treatment you can sit back, read, work on your laptop, listen to music or simply relax.

APPROXIMATELY 70 MINUTES

ADVANTAGES OF CRYOLIPOLYSIS

❄ NON-INVASIVE

❄ NO SCARS

❄ NO TIME OFF

❄ NO ANESTHESIA

ICE AESTHETIC MAKES THE DIFFERENCE

MEDICAL COMPETENCE AND LONG-TERM EXPERIENCE

ICE AESTHETIC® specialises in the practice of cryolipolysis, a non-invasive method used to treat local fat deposits by freezing. A high level of quality combined with the experience of over 20.000 treatments per year, has gained us an outstanding reputation among our clients. With both, the advanced European-made equipment and our comprehensive know-how, we can help you to treat a variety of body zones with the gentle removal of fat deposits, reliably and pain-free.

As the prime supplier for medical cryolipolysis devices in Europe, ICE AESTHETIC® works together with a broad network of specialists, primarily consisting of dermatologists and cosmetic surgeons. All around Europe new locations are being added to the network each month, enabling us to provide quality medical cryolipolysis in an area near you. The innovative method has become a recognised standard procedure amongst the non-invasive treatments in the USA. ICE AESTHETIC® has set itself the goal of establishing this unique procedure across Europe. First and foremost, quality and the safety of our clients always take precedence.

- Healthcare professionals and medical staff
- Extremely high customer satisfaction
- Experience based on more than 20.000 treatments/year
- Highest quality and safety standards
- Elaborate consultation & free after-care

SAFE & CERTIFIED MEDICAL EQUIPMENT

- Medical devices class IIa (93/42 EWG)
- 7 differently shaped applicators for nearly every body zone
- Treatment of up to two body zones at the same time
- 15 different temperature sensors ensuring highest patient's safety
- First choice among doctors in France
